

## The Fine Print

Please note that Riverside Milk is raw milk and has not been pasteurised.

The Ministry of Primary Industries advises the following: *'Raw milk may contain microorganisms that can cause serious illness. To reduce the risk of illness, raw milk should be heated to at least 70 degree Celsius for one minute. This is critical for infants, young children, the elderly, pregnant women and people with weakened immune systems.'*

This product is not suitable as a complete milk replacement for children under 2 years.

Store at or below 4 degrees Celsius.

Do not consume after the use by date (no longer than 4 days after the milk's batch number date). The batch number is written on a sticker at the top of the vending machine.

Please fill out our customer registration form at the vending machine when you get your Riverside Milk for the first time.

Please contact us for any questions or concerns: [milk@riverside.org.nz](mailto:milk@riverside.org.nz) or ring Tristan (Farm Manager): 022 361 5015
